

# Aduino UNO med USB kabel

**Produktkode:** 242aa

**Tilgjengelighet:** Opp til 1 mnd leveringstid

**Lager :** Arduinokort

**Pris:** kr. 70,00

## Short Description

UNO R3 ATMEGA16U2 Development Board With USB Cable For Arduino

## Beskrivelse

### Features:

Open circuit diagram of the original design, the development of software interface for free download, can also be in accordance with the requirements and their modified, download the program is simple and convenient. Can simply use sensors, all kinds of electronic components connection (such as: LED lights, buzzer, buttons, photoresistance, etc.), make all sorts of interesting work. Microprocessor controller, using high-speed development interface and the environment are very simple and easy to understand, very suitable for beginners to learn.

### Specification:

Digital I/O Digital inputs/outputs were 0~13.

Analog I/O Analog input/output: 0~5

Support ISP download function.

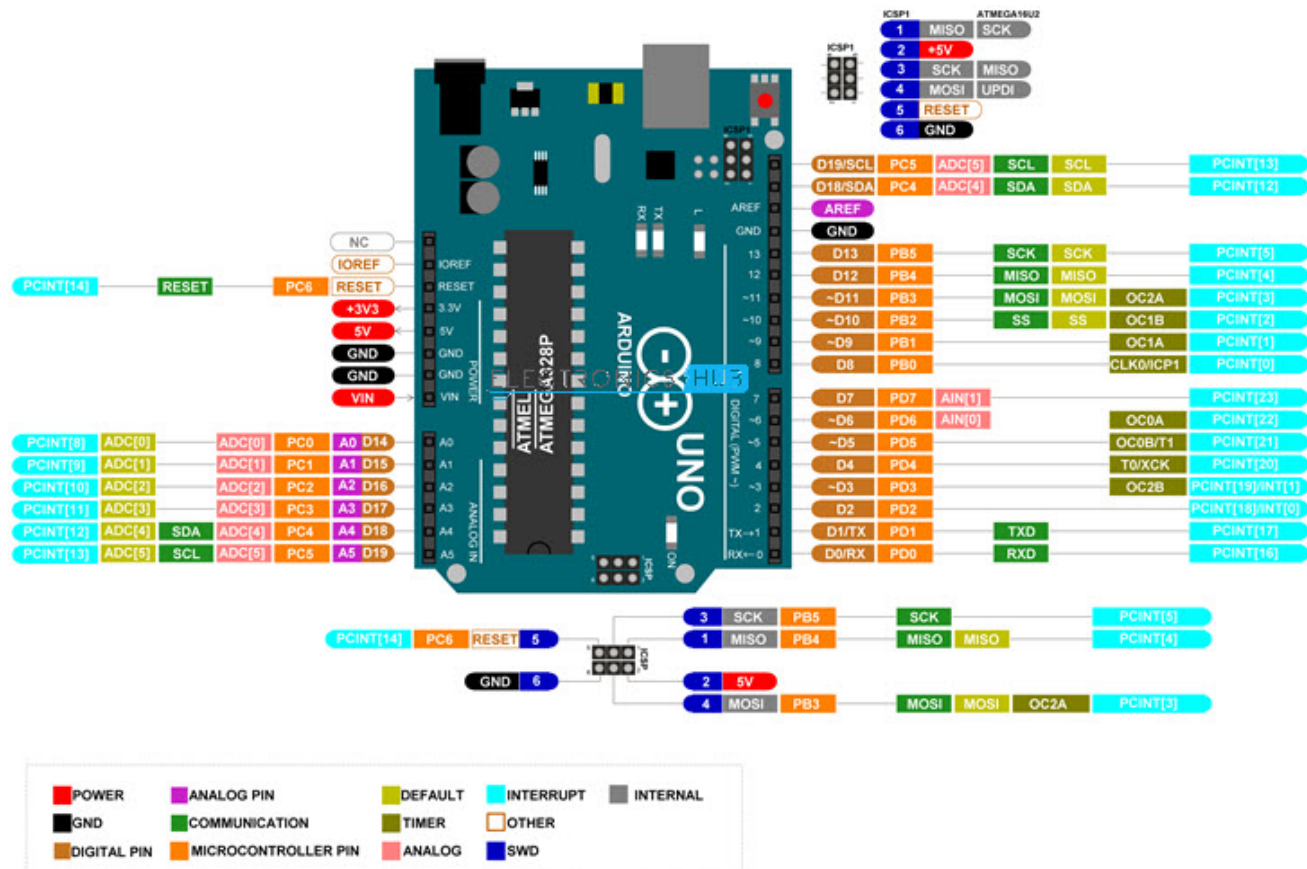

Output voltage: 3.3 V and 5 V dc voltage output dc voltage output.

### Package List:

1 x UNO R3 Board

1 x USB Cable
