Aduino UNO med USB kabel

Produktkode: 242aa
Tilgjengelighet: Opp til 1 mnd leveringstid
Weight: 20.00g
Custom Field 5 (Location): Arduinokort

Pris: kr. 70,00

Kort beskrivelse
UNO R3 ATMEGA16U2 Development Board With USB Cable For Arduino

Beskrivelse

Features:

Open circuit diagram of the original design, the development of software interface for free download, can also be in accordance with the requirements and their modified, download the program is simple and convenient. Can simply use sensors, all kinds of electronic components connection (such as: LED lights, buzzer, buttons, photoresistance, etc.), make all sorts of interesting work.Microprocessor controller, using high-speed development interface and the environment are very simple and easy to understand, very suitable for beginners to learn.

Specification:

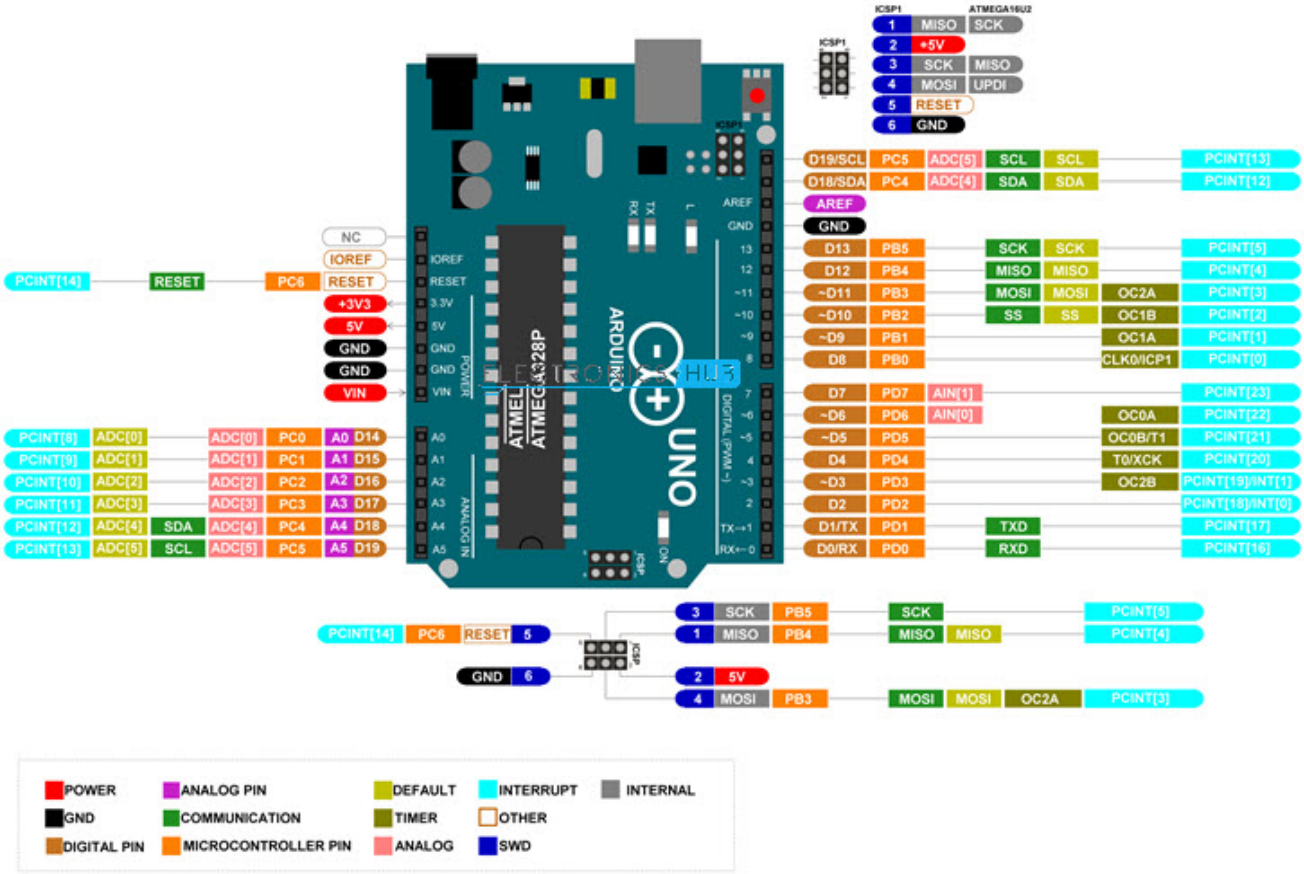

Digital I/O Digital inputs/outputs were?0~13.
Analog I/O Analog input/output: 0~5
Support ISP download function.

The input voltage: when connected to the computer USB without external power supply, external power supply 7 v to 12 v dc input voltage.
Output voltage: 3.3 V and 5 V dc voltage output dc voltage output.

Package List:

1 x UNO R3 Board
1 x USB Cable

Pinout
